

## *What It Does*

Removes:

- Iron
- Manganese
- Radon gas
- Methane gas
- CO2
- Hydrogen sulfides
- Hazardous volatiles

Sustains a “down the well” process indefinitely without debilitating scaling and bio-fouling.

## *The Solution*

The Airwell System for Well Water can solve the problems of:

- Rotten egg smells
- Staining of household appliances, fixtures, toilets etc.
- Staining of laundry
- Iron smells
- Radon gas
- “Spurting” tap water from methane gas

Automatic, no chemicals,  
no maintenance

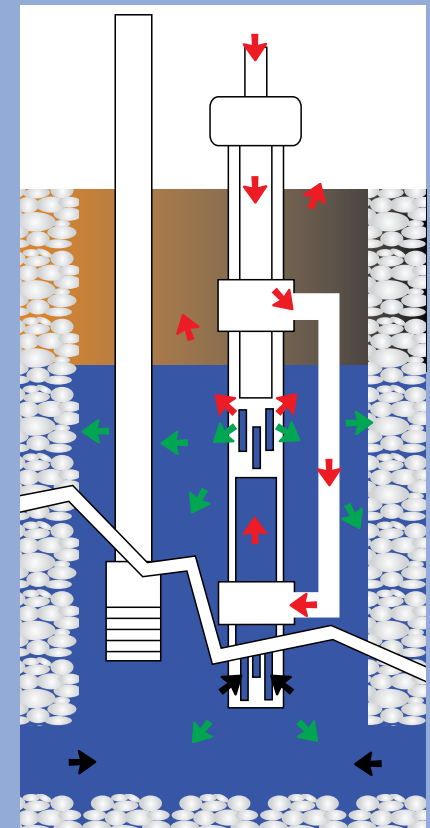

Raise your quality of life and  
eliminate your embarrassment!

**Airwell**  
Technology Inc.

## *How it Works*

A pipe with an aeration section is inserted from top to bottom in the well. Pressurized air is used to both circulate water in the well and aquifer, and to oxidize it. The oxidation penetrates the water in the well and aquifer to remove these aesthetic contaminants and other volatile materials.

*The Revolution  
in Residential  
Well Water Treatment*

Claims are easy - proof is harder.  
That's why we subjected the Airwell to  
independent third party testing in high  
contaminant environments - proving the  
effectiveness of the Airwell system.
